

Create a new Project

In this guide, you will create a new project.

[Use Plantview Workspace](#)

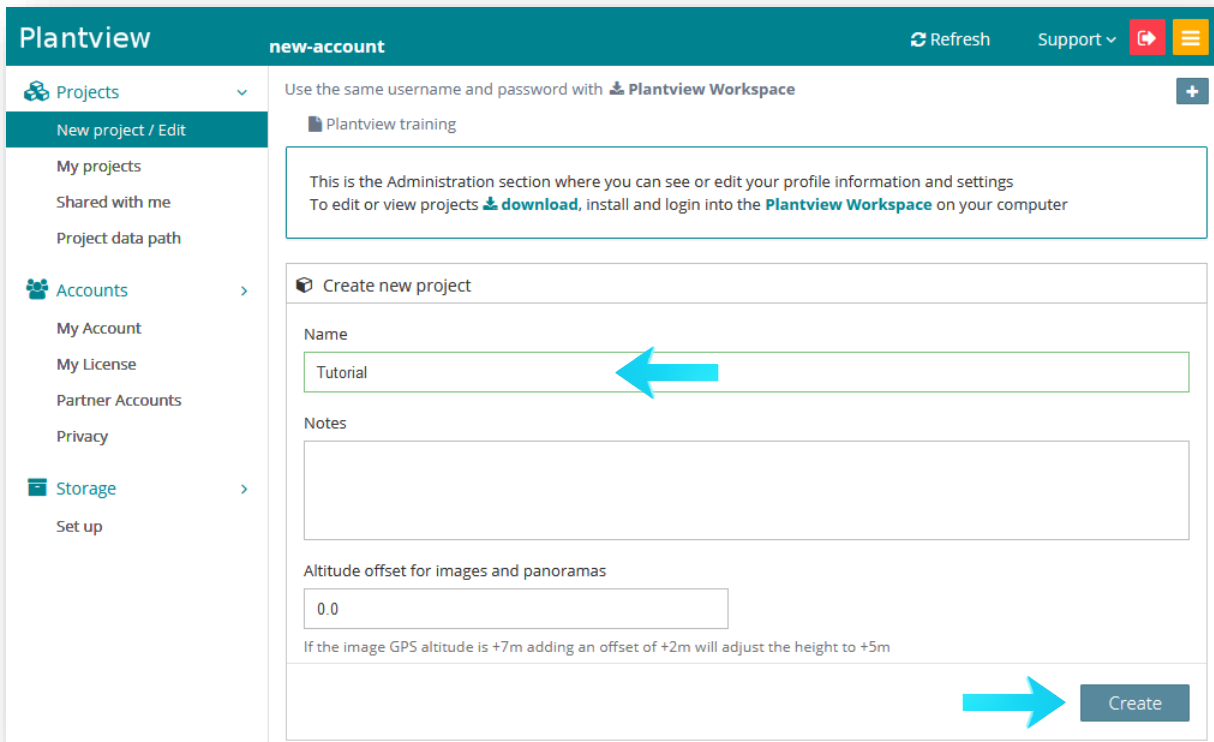

1.

Press on **New project**

2.

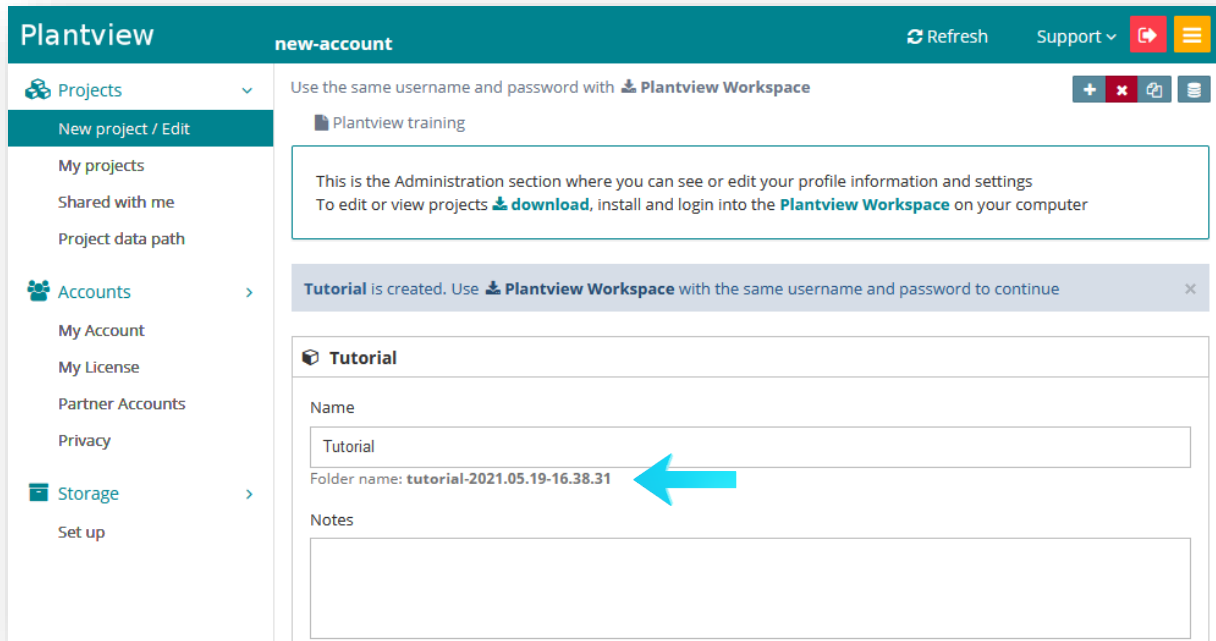

The Administration section will open in a new tab. Enter the project name and press **Create**.

3.

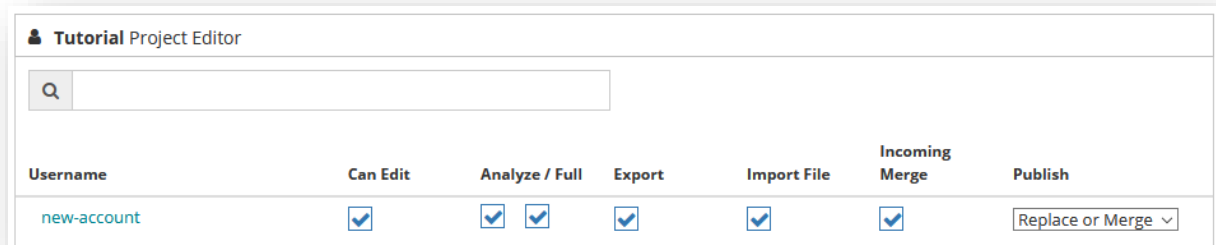

The new project has been created and a unique folder name has been assigned to the project.

The folder name is the unique name of the directory where the data will be located on your computer.

4.

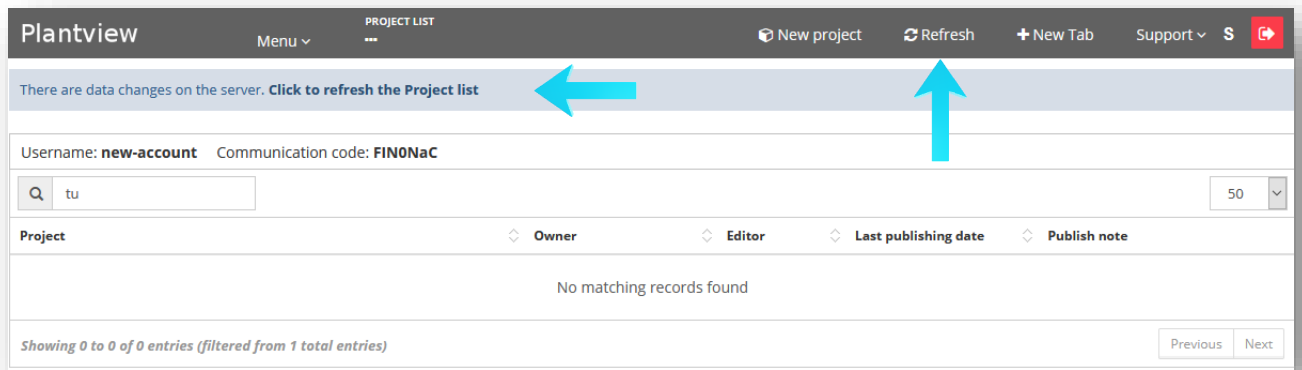

Adjust the Project Editor Permissions

Can Edit	user can edit the project
Analyze	user can analyze new files only
Full Analyze	user can analyze edited files and new files
Export	user can export the project file with the project structure
Import File	user can replace his project structure by importing a project file
Incoming Merge	user can merge or replace the project structure by importing a project file or by sync from server
Publish	User options for publishing the project (None, Replace, Merge, Replace or Merge)

5.

Switch to the Plantview Workspace. Refresh the PROJECT LIST.

The new project will now be shown in the PROJECT LIST
